

## PROGRESS REPORT December 2015

### Morpeth-based 'self-help' school project enters final phases in Tanzania

#### HEADLINES

The major structure of the school building is almost complete.

Contracts for work on the solar-panelled school roof are under negotiation and the work is expected to commence in January 2016. The American-based charity Solar Circle has contributed \$100,000 to this work.

Roofworks are designed to link with a rainwater recycling and purification system.

The construction team are working from room to room, giving the rough brick walls their base coat of plaster.

Specialist contractors have begun the work of installing electrical circuits.

This room will be an office for the school Secretary.

Classrooms are designed to accommodate classes of up to 35 pupils in comfort. Window openings provide for good natural light, controlled by blinds.

In addition to the roof installation scheduled to begin during January 2016, other remaining internal works include:

- Installation of framed windows and window blinds
- Wall plastering
- Furniture and fittings

On completion, the school will have facilities for up to 490 pupils.

### On-site control
